

Packaging Steps For High Power Lithium Batteries

How to safely stack lithium batteries in the ULiBTM Box

Step 1

Remove bag of CellblockEX Fire Suppressant from the ULiB Box

Step 2
Place Lithium Battery into ULiB
Box

Step 3

Place CellblockEX Bag on top of the battery and partially close the lid

Note: In the event of a battery fire the heat will release the CellblockEX granules from the bag and extinguish the battery fire.

Step 4

Continue to load batteries into the ULiB Box as they become available, with a minimum 25-30mm spacing between each battery.

Step 5

After each additional battery is stacked in the ULiB Box return the CellblockEX Bag on top and partially close the lid

Step 6

When the ULiB Box is full cut the top of the CellblockEx bag and pour the granules into the ULiB Box

Step 7

Make sure that the batteries are covered with at least 25-30mm of CellblockEX granules

Step 8

Close the ULiB Box and secure with the 2 over-center Snap-Flat latches.

Goto the UNISEG website, for DG Label Templates to attach to the front and rear of the box.
